Time: 9:07

By: JUSTIN KYLE P. ASNE
Local Legislative Staff Officer I

Subject: Request for Product Presentation on Modular Wastewater Treatment and Environmental Compliance Solutions

Dear Sir/Madam,

Warm greetings from Biogreen CDO.

Biogreen CDO respectfully expresses its intent to introduce Biogreen and its modular wastewater treatment technologies to the City Government of Cagayan de Oro, with the objective of exploring how our systems and technical capabilities may support the City's wastewater management, environmental compliance, and sustainability initiatives. In this regard, we respectfully request the opportunity to introduce and present Biogreen during your scheduled activity on September 2, 2026, and to discuss potential applications of our wastewater treatment technology for government facilities, public infrastructure, institutions, commercial establishments, and other wastewater-generating facilities within the City.

Biogreen CDO specializes in the design, supply, installation, rehabilitation, upgrading, operation, and maintenance of modular Sewage Treatment Plant (STP) and wastewater treatment systems for domestic, commercial, institutional, and industrial applications. Our objective is to provide practical, reliable, and sustainable wastewater treatment solutions that support compliance with applicable environmental standards while minimizing operational complexity and long-term maintenance requirements. Proper wastewater treatment is an important component of responsible facility management, environmental protection, public health, and regulatory compliance. Government facilities, public infrastructure, institutions, commercial establishments, and other wastewater-generating facilities require reliable treatment systems capable of managing varying wastewater characteristics while supporting compliance with applicable environmental regulations and DENR-EMB standards.

The Biogreen Modular Electromechanical STP System utilizes advanced treatment technologies which may include Electrocoagulation (EC), Advanced Oxidation Process (AOP), filtration, polishing, and disinfection. The system is designed to provide efficient wastewater treatment while offering flexibility for different facility requirements and site conditions. Compared with conventional biological treatment systems, which rely on maintaining specific biological conditions and bacterial populations, the Biogreen system provides a more equipment-driven treatment approach. It may also reduce dependence on continuous chemical dosing compared with conventional chemical treatment systems, helping simplify operation, chemical handling, and maintenance requirements.

Sewage Treatment Plant (STP) Provider
Wastewater Treatment & Compliance Solutions

The Biogreen Modular STP System offers several practical advantages, including:

- Reliable treatment performance under varying wastewater conditions;
- Adaptability to different wastewater characteristics and operational requirements;
- Reduced dependence on biological activity and continuous chemical dosing;
- Modular and space-efficient design suitable for various facility configurations;
- Expandable and adaptable system configuration;
- Simplified operation and monitoring requirements;
- Reduced maintenance complexity through an equipment-based treatment process; and
- Support for compliance with applicable wastewater discharge standards.

Beyond the supply and installation of wastewater treatment systems, Biogreen CDO provides technical support throughout the life of a project. Our services may include wastewater assessment and technical consultation, system design and engineering support, installation and commissioning, preventive maintenance, operator training, troubleshooting, and after-sales technical assistance. Should we be given the opportunity to introduce Biogreen during the September 2, 2026 scheduled activity, we hope to present:

- An overview of Biogreen CDO and our wastewater treatment capabilities;
- The features and advantages of the Biogreen modular electromechanical wastewater treatment technology;
- Applications for government, institutional, commercial, and industrial facilities;
- Rehabilitation and upgrading solutions for existing wastewater treatment facilities;
- Our approach to operation, maintenance, technical support, and personnel training; and
- Potential areas where Biogreen CDO may support the City Government of Cagayan de Oro's present and future wastewater management and environmental compliance requirements.

Through this Letter of Intent, Biogreen CDO respectfully expresses its interest in establishing a working relationship with the City Government of Cagayan de Oro and in making our wastewater treatment technology and technical expertise available for consideration in appropriate existing and future projects. We would be honored to be given the opportunity to introduce Biogreen during your scheduled activity on September 2, 2026 and to discuss how our technology may contribute to the City's wastewater management, environmental protection, and sustainability objectives.

Thank you for your time and consideration. We look forward to the opportunity to present Biogreen and explore potential areas of cooperation with the City Government of Cagayan de Oro.

Respectfully yours,

LORELLE LEYSON
